Fictional sample resume — for demonstration/practice purposes only.

SUMMARY

Cloud platform engineer with 3 years of experience designing and operating multi-cloud infrastructure on AWS and GCP. Focused on Kubernetes reliability, Terraform-driven automation, and reducing operational toil for product teams. Comfortable owning incidents end-to-end, from detection through postmortem.

TECHNICAL SKILLS

Cloud: AWS (EC2, EKS, IAM, VPC, S3), GCP (GKE, IAM)

Containers: Kubernetes, Docker, Helm

laC: Terraform, Ansible

CI/CD: GitHub Actions, ArgoCD, Jenkins

Languages: Go, Python, Bash

Observability: Prometheus, Grafana, OpenTelemetry

Networking: DNS, Load Balancing, TLS, VPN

Other: Linux internals, systems debugging, log correlation

EXPERIENCE

Cloud Infrastructure Engineer — Meridian Data Systems (fictional)

Pune, India (Remote) | Aug 2023 - Present

- Migrated 30+ microservices from EC2-based deployments to EKS, cutting deployment time from 25 minutes to under 4 minutes via GitOps with ArgoCD.
- Authored reusable Terraform modules for VPC, IAM, and RDS provisioning, reducing new-environment setup time from 2 days to 3 hours.
- Built a Go-based internal CLI for developers to self-serve namespace creation and resource quota requests, removing platform team as a bottleneck.
- Implemented Prometheus/Grafana-based SLOs for 12 critical services and led on-call rotation, improving mean-time-to-detect by 40%.
- Reduced monthly cloud spend by 22% through rightsizing node pools and migrating batch workloads to spot instances.

DevOps Intern — Coral Reef Analytics (fictional)

Bengaluru, India | Jan 2023 - Jul 2023

- Containerized 6 legacy Python services with Docker and wrote Helm charts for staging and production rollout.
- Set up a centralized logging pipeline (Fluent Bit + Loki) and wrote Ansible playbooks to automate patching across 50+ VMs.

PROJECTS

quota-request-bot — Go, Kubernetes client-go, chat API

- Built a chat bot that lets engineers request namespace resource quota increases with automatic approval based on policy rules.
- Used client-go to watch resource usage and post real-time alerts to team channels.

plan-cost-check — Python, infrastructure-as-code plan output, cloud pricing API

- CLI tool that parses infrastructure change plans and estimates monthly cost delta before merge, integrated as a CI check; adopted by 3 teams.

EDUCATION

B.Tech in Computer Engineering

Institute of Engineering & Technology (fictional) | 2019 - 2023

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA) - dummy credential, 2024
- AWS Certified Solutions Architect - Associate - dummy credential, 2023
