

Backend Engineer – Cloud Infrastructure (Entry Level)

Location: Bengaluru, India (Hybrid)

Experience: 0–1 years

Employment Type: Full-time

About Acme Cloud Systems

Acme Cloud Systems builds developer tooling and managed infrastructure that helps mid-size engineering teams ship and scale backend services without hiring a dedicated platform team. Our core product provisions and monitors cloud workloads across AWS, GCP, and on-prem Kubernetes clusters for over 300 customers worldwide.

Role Summary

We are hiring a Backend Engineer to join our Platform team. You will work on the services that provision customer infrastructure, expose internal APIs, and process telemetry at scale. This is an individual-contributor role reporting to the Engineering Manager, Platform, with close collaboration alongside SRE and DevOps engineers.

Responsibilities

- Design, build, and maintain REST/gRPC backend services in Go and Python used by internal and customer-facing systems.
- Write clean, tested, well-documented code and participate actively in code review.
- Contribute to infrastructure-as-code (Terraform) for provisioning cloud resources across AWS/GCP.
- Work with containerized services (Docker, Kubernetes) and CI/CD pipelines for deployment.
- Debug and resolve production issues alongside on-call engineers; contribute to postmortems.
- Collaborate with senior engineers to break down features into shippable, testable increments.

Required Qualifications

- Bachelor's/Master's degree in Computer Science, IT, or related field (final-year students eligible).
- Solid understanding of data structures, algorithms, and operating system/networking fundamentals.
- Working proficiency in at least one of Go or Python; comfort reading the other.
- Familiarity with relational databases (PostgreSQL/MySQL) and basic SQL.
- Exposure to Git-based workflows and Linux command-line environments.
- Strong problem-solving ability and willingness to learn distributed-systems concepts on the job.

Preferred (Good to Have)

- Personal or academic projects involving cloud platforms (AWS/GCP/OCI), Docker, or CI/CD.
- Prior internship experience in a backend/platform engineering role.
- Open-source contributions or a public GitHub profile demonstrating applied coding ability.

What We Offer

Competitive entry-level compensation, structured mentorship from senior platform engineers, a hybrid work model, learning stipend for certifications/courses, and ownership of real production systems from day one.
