Summary

Final-year Computer Science student with hands-on experience building backend services in Go and Python, deploying containerized applications, and working across AWS/GCP. Seeking an entry-level Backend/Cloud Engineering role to contribute to production-grade platform systems.

Education

B.Tech/M.Sc. in Computer Science & Engineering

Retroville Institute of Technology | Expected Graduation: 2026 | CGPA: 8.7/10

Technical Skills

- **Languages:** Go, Python, TypeScript, SQL
- **Cloud & Infra:** AWS (EC2, S3, Lambda), GCP (Compute Engine, Cloud Storage), Docker, Terraform (basic)
- **Tools:** Git/GitHub, Linux, PostgreSQL, REST APIs, CI/CD (GitHub Actions)
- **Concepts:** Data Structures & Algorithms, Operating Systems, Computer Networks, Distributed Systems (fundamentals)

Experience

Software Engineering Intern – NeutronLabs Inc.

Jan 2026 – Apr 2026

- Built a Go-based internal charting/reporting library used by 3 downstream teams, adding a server-side rendering path alongside the existing browser renderer.
- Improved rendering throughput by profiling hot paths and introducing buffer pooling, reducing memory allocations under sustained load.
- Containerized the service with Docker and wired it into the team's existing CI/CD pipeline for automated testing and deployment.
- Collaborated with senior engineers on code review and design discussions, translating feedback into shipped improvements.

Projects

CloudSweep – Serverless Media Moderation Pipeline

- Built an AWS Lambda-based pipeline (S3, SNS, DynamoDB) to automatically flag and route uploaded media for review.
- Wrote infrastructure as Terraform modules to make the stack reproducible across environments.

DepMap – Python Dependency Visualization CLI

- Published a CLI tool on PyPI that parses project dependency graphs and renders them as interactive diagrams.
- Set up automated testing and CI/CD; tool has been adopted by several open-source maintainers.

Achievements

- Published open-source Go module for numerical utilities, documented on pkg.go.dev.
- Completed self-directed coursework in distributed systems and cloud infrastructure fundamentals.
