Summary

Final-year Computer Science student with academic and project experience in manual and automated software testing. Comfortable writing test automation in Python, designing test cases from requirements, and validating APIs. Seeking an entry-level QA Engineer / SDET role.

Education

B.Tech in Computer Science & Engineering

Dimmsdale University of Technology | Expected Graduation: 2026 | CGPA: 8.3/10

Technical Skills

- **Languages:** Python, Java, SQL
- **Testing Tools:** Selenium WebDriver, Playwright, Postman, pytest
- **Concepts:** Test case design, functional/regression testing, API testing, bug lifecycle management
- **Other:** Git/GitHub, basic CI/CD (GitHub Actions), Linux basics

Experience

QA Intern – Fairywing Software

Jan 2026 – Apr 2026

- Wrote 60+ automated UI test cases using Selenium WebDriver, covering core checkout and account-management flows.
- Built API test suites in Postman/pytest for a REST backend, catching 12 regression bugs before release.
- Logged and tracked bugs in the team's issue tracker with clear repro steps, reducing back-and-forth with developers.
- Integrated the automated test suite into the team's CI pipeline, running tests on every pull request.

Projects

TestSprint – Automated Regression Suite for a Mock E-Commerce App

- Built an end-to-end Playwright test suite covering cart, checkout, and login flows for a sample e-commerce app.
- Configured the suite to run automatically via GitHub Actions on every commit, with a Slack notification on failures.

API Sentinel – API Test Framework

- Built a lightweight Python/pytest framework for testing REST APIs with reusable fixtures and schema validation.
- Documented the framework so classmates could reuse it for their own course projects.

Achievements

- Completed coursework and self-study in software testing fundamentals and test automation.
- Active contributor to a university coding club focused on peer code reviews and testing practices.
