Fictional sample resume — for demonstration/practice purposes only.

SUMMARY

Backend engineer graduating with an MSc in Information Technology, with internship experience building high-throughput APIs and async processing pipelines in Python and Go. Strong grounding in relational database design and system performance. Enjoys writing clean, well-tested backend code and reasoning about latency and correctness trade-offs.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript

Backend: FastAPI, Flask, net/http (Go)

Databases: PostgreSQL, Redis, pgvector

Messaging: Redis Streams, Kafka (basics)

Testing: pytest, Go testing, load testing (k6)

Infra: Docker, GitHub Actions, basic Kubernetes

Concepts: REST/gRPC APIs, caching, rate limiting

Tools: Git, Postman, pprof, EXPLAIN ANALYZE

EXPERIENCE

Backend Engineering Intern — Orbital Sensor Systems (fictional)

Ahmedabad, India | Jan 2025 - Jun 2025

- Built a FastAPI service handling 10k+ concurrent requests for a telemetry ingestion pipeline, keeping p95 latency under 60ms.
- Redesigned the ingestion queue consumer using Redis Streams, cutting average processing lag by roughly 55%.
- Wrote a batch export pipeline that converts stored telemetry into downstream analytics-ready Parquet files.
- Profiled the API layer with py-spy and eliminated redundant serialization steps, reducing average response time by 30%.
- Collaborated with the frontend team to align API response schemas, cutting integration bugs across releases.

Software Development Intern — Fernbank Labs (fictional)

Remote | May 2024 - Aug 2024

- Built REST APIs in FastAPI for a document processing pipeline, integrating async job queues backed by Redis.
- Designed PostgreSQL schema for multi-tenant document storage with row-level access scoping.
- Wrote integration tests covering 90%+ of API endpoints, catching regressions before staging deploys.

PROJECTS

ShiftQueue — FastAPI, arq/Redis, PostgreSQL

- Backend service for scheduling and auto-balancing shift assignments across teams, with conflict detection on write.
- Used async job workers (arq) for notification delivery and nightly schedule-conflict reports.

importwatch — Python, published as a CLI package (sample)

- CLI tool that visualizes dependency graphs and flags circular imports in Python projects.

EDUCATION

MSc in Information Technology

Northbridge Institute of Technology (fictional) | 2024 - 2026 (Final Year)
