

Rohan Iyer

Cloud Security Engineer

dummy.candidate3@example.com | +91-90000-00003 | Hyderabad, India (Remote) | github.com/dummy-candidate3 | linkedin.com/in/dummy-candidate3

Fictional sample resume — for demonstration/practice purposes only.

SUMMARY

Security-focused engineer with 2 years of experience hardening AWS and GCP environments, building automated remediation tooling, and supporting SOC 2 audit cycles. Background in backend development gives strong ability to embed security checks directly into CI/CD pipelines rather than treating them as a separate gate.

TECHNICAL SKILLS

Cloud Security: AWS IAM, GCP IAM, Security Groups, KMS

Scanning: Trivy, Grype, tfsec, Checkov

Policy-as-Code: OPA/Rego, Sentinel (basics)

Secrets: HashiCorp Vault, AWS Secrets Manager

Languages: Python, Go, Bash

Compliance: SOC 2 evidence collection, access reviews

Monitoring: CloudTrail, GuardDuty, basic SIEM (ELK)

Other: Kubernetes RBAC hardening, network segmentation

EXPERIENCE

Cloud Security Engineer — Ironclad Cyber Solutions (fictional)

Hyderabad, India (Remote) | Jul 2024 - Present

- Built a Python-based scanner that flags overly permissive IAM policies across 15 AWS accounts, cutting manual review time from 2 days to 3 hours per audit cycle.
- Automated remediation for public S3 buckets and unrestricted security groups using Lambda-based playbooks triggered via CloudTrail events.
- Integrated Trivy and Checkov into CI pipelines, blocking merges that introduced critical container or IaC vulnerabilities.
- Led quarterly access reviews across 200+ IAM identities and prepared audit evidence supporting successful SOC 2 Type II certification.

Security Engineering Intern — Bluewave Fintech (fictional)

Chennai, India | Jan 2024 - Jun 2024

- Assisted in threat modeling for 3 new microservices before production launch, identifying 8 medium/high findings.
- Wrote automation to rotate access keys older than 90 days and documented common cloud misconfiguration patterns for engineering onboarding.

PROJECTS

iam-least-priv-analyzer — Python, boto3, AWS IAM Access Analyzer

- Tool that compares granted IAM permissions against actual CloudTrail usage over 90 days and suggests tightened policies.
- Generates a diff report reviewed by engineers before applying least-privilege changes.

media-guard — AWS Lambda, open-source image classifier, S3

- Serverless content-moderation pipeline that inspects uploaded image content locally without persisting media, returning confidence scores instead of binary verdicts.

EDUCATION

B.Tech in Information Technology

Coastal Institute of Technology (fictional) | 2019 - 2023

CERTIFICATIONS

- AWS Certified Security - Specialty - dummy credential, 2024
- Certified Kubernetes Security Specialist (CKS) - dummy credential, in progress
