

Riley Smith

Site Reliability Engineer | riley.smith.fake@example.com | (555) 010-5555

Professional Summary

Dedicated Site Reliability Engineer with 6 years of experience ensuring high availability, performance, and security of large-scale distributed systems. Expert in infrastructure automation, incident response, and building resilient cloud architectures. Passionate about eliminating toil through code.

Professional Experience

Site Reliability Engineer | FinTech Secure (2021 - Present)

- Managed a fleet of 200+ microservices on AWS EKS (Elastic Kubernetes Service), maintaining an uptime of 99.99% over two years.
- Authored Terraform modules to completely automate the provisioning of infrastructure across multi-region VPCs.
- Implemented a comprehensive incident management workflow and on-call rotation, reducing alert fatigue by tuning Datadog monitors to filter out 80% of noisy alerts.
- Conducted blameless post-mortems and drove reliability engineering initiatives that reduced critical P1 incidents by 50%.

Systems Administrator | Enterprise IT (2018 - 2021)

- Automated server configuration and patching processes using Ansible, managing over 500 Linux VMs.
- Developed internal CLI tools in Python to streamline routine operational tasks and database backups.

Education

B.S. Information Technology | Tech College (2014 - 2018)

Technical Skills

Cloud: AWS (EKS, IAM, VPC, RDS), GCP

Containers: Docker, Kubernetes, Helm

IaC & Config Management: Terraform, Ansible, CloudFormation

Observability: Datadog, Prometheus, Grafana, ELK Stack

Programming: Python, Bash, Go
